

What is claimed:

1. A method of attaching a leather trim cover to a foam pad using a laminate having a double-sided pressure sensitive adhesive film along a top surface and a heat-activated adhesive along an opposing bottom surface, the method comprising the steps of:

placing the top surface of the laminate against the leather trim cover and applying pressure of the pressure sensitive adhesive film against the leather trim cover to bond the laminate thereto;

applying the bottom surface of the laminate to the foam pad; and

heating the bottom surface of the laminate to cure the heat-activated adhesive and bond the leather trim cover to the foam pad.

2. A method as set forth in claim 1 further including the step of heating the leather trim cover with the laminate bonded thereto to soften the trim cover prior to applying the laminate to the foam pad.

3. A method as set forth in claim 2 further including the step of removing a protective cover from the pressure sensitive adhesive film prior to placing the laminate against the trim cover.

4. A method as set forth in claim 3 further including the step of heating the bonded trim cover, laminate and foam pad to relax the trim cover and remove wrinkles from the surface thereof.

5. A method as set forth in claim 3 further including adhesively bonding the foam pad with the trim cover and laminate attached thereto to a second foam pad shaped to form a motor vehicle seat.
